Assignment	Lab 5

Execution of Lab Tasks

Task 1 - Connecting to the Robot

Testing with the app

Moss downloaded app and him and Ian tested movement and color detection, ran into issue with connection that was debugged collaboratively by both Ian and Moss

Jupyter Lab

Moss connected to the robot with the Jupyter lab and ran the initial motion test program. Then created a minimal program to drive motors. Ian watched and helped as needed.

VNC Viewer

Ian connected via VNC Viewer.

Docker Container

Ian and Daniel opened docker and ran the Mcnamu_driver and yahboom_keyboard commands and controlled the robot

Task 2

Peter connected to the robot via jupyter lab and ran the ultrasonic sensor obstacle avoidance program and also changed the threshold for the detection distance.

Daniel answered the required question for task 2.

Task 3

Ian connected with VNC Viewer and ran the commands and took the screenshots for the gesture controls

Moss and Daniel did the gestures to test the robot and put it on floor to see if it was making the right shapes
